## Data model to Database design

**Starting shortly, please wait!**

# Presented by the ActivityInfo Team

All in one information management software for humanitarian and development operations

- Track activities, outcomes
- Beneficiary management
- Surveys
- Work offline/online

The screenshot shows the ActivityInfo website homepage. At the top, there is a navigation bar with links for Features, Pricing, Customers, Support, News, Contact us, and a Log in button. The main content area features the ActivityInfo logo and the text: "Information management software for the social sector. Everything you need for your data collection and reporting needs. No-code relational database builder. Integrated analysis tools and advanced user management capabilities." Below this, a section titled "ActivityInfo is perfect for" lists four categories: Case Management, Monitoring and Evaluation, Humanitarian coordination, and Cash & Voucher Assistance. A section titled "Our key features" lists: Mobile data collection, Data entry, Data management, and Analysis & visualization. On the right side, there is a large map of East Africa with several colored bubbles (blue, yellow, purple) of varying sizes, each containing a number, representing data points on a geographical map.

# BeDataDriven Mission

Provide the UN and NGOs with a standard, easy-to-use and comprehensive data management platform so that as many organizations as possible can become data-driven to achieve better outcomes for rights holders worldwide.

BeDataDriven pursues this mission by building and helping organizations implement ActivityInfo.

# ActivityInfo

An end-to-end solution for M&E data management

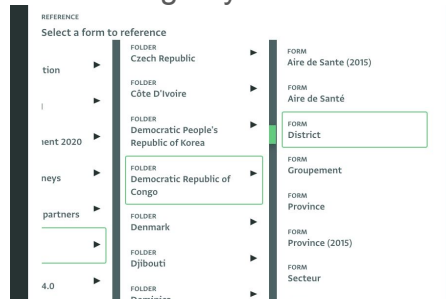

## Data collection

Easily collect the data you need from anywhere

## Data management

Organize your information according to your workflow

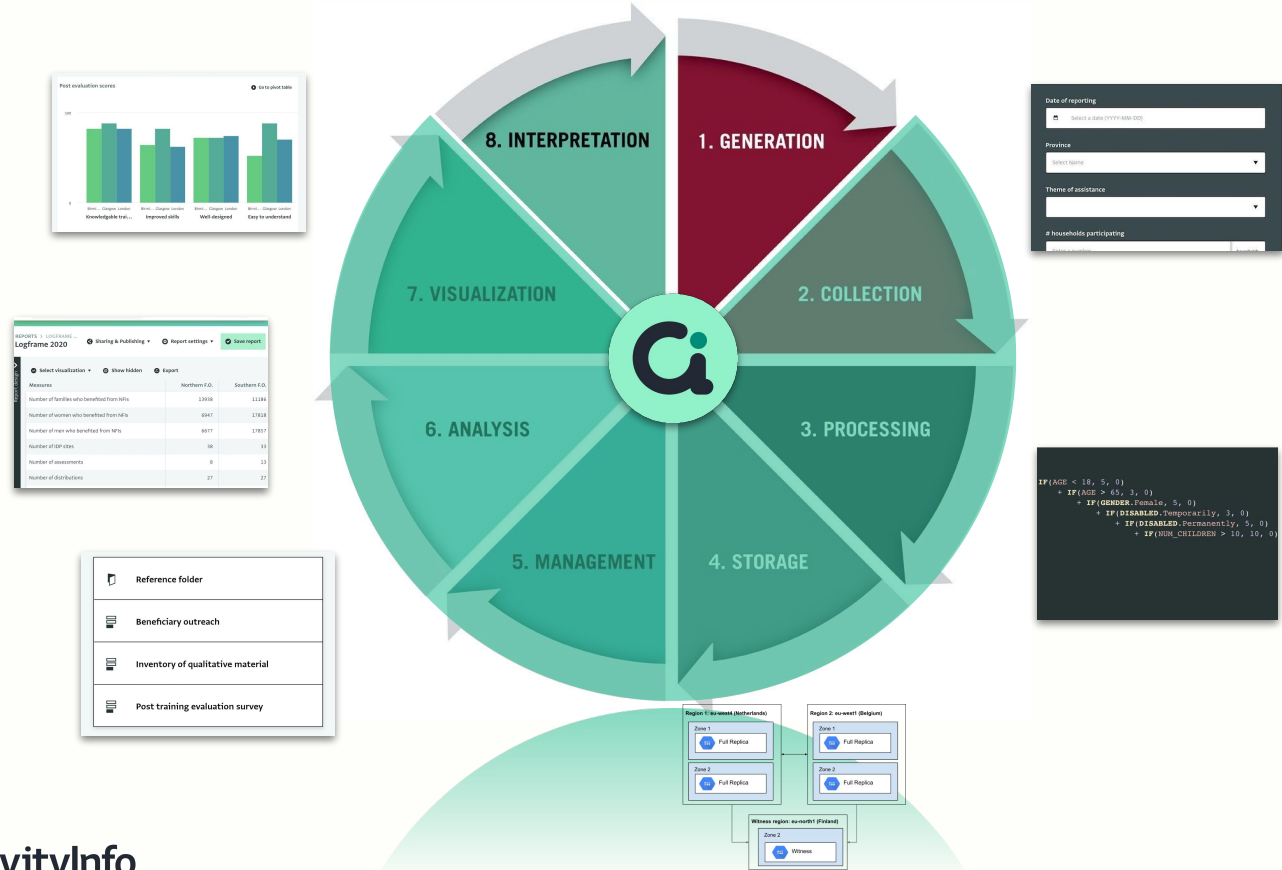

## Data analysis

Generate actionable insights in real-time

ActivityInfo is your **integrated** solution for managing your data across the data lifecycle.

# Outline

**01** From Data Model to Database: Bridging the Gap

**02** Implementing Data Quality Measures

**03** Live Demonstration in ActivityInfo

**04** Q&A

Overview of the data  
model from Session #1

# Food for Progress Project - USDA

PARTNERS *of the* AMERICAS  
Connect • Serve • Change Lives

Who

Developing countries and emerging democracies

What

Modernize and strengthen the agricultural sector

How

Donated agricultural commodities are sold on the local market and the proceeds are used to support agricultural, economic, or infrastructure development programs.

# Overview of MEAL Plan

	Indicators	Calculation	Responsibilities	Data Use
SO 1	Yield of targeted agricultural commodities among program participants with USDA assistance	Yield per hectare=Total Production (PT) / Total Production Units (PU) PT: Metric tons (tm) PU: Hectares (ha) Dis: Farm size, gender, age	Field staff collect shortly after harvest targeting the primary recipient using quantitative surveys Sample based on farm records.  MandE specialist responsible for analysis and reporting	Donor reporting on annual basis
IR 1.1	Number of individuals accessing agriculture related financing as a result of USDA assistance	Unique count of individual farmers, cooperatives, suppliers, SMEs access financing (i.e. borrowing in cash or kind, official loans, non borrowing such as leasing	Field staff identify all individuals and organizations and collect basic information. They assess whether participants accessed funding during the reference year via structure questionnaires.  MandE specialist responsible for analysis and reporting	Internal Monitoring on monthly basis

Reports

# From Data Model to Database: Bridging the Gap

# Are we ready to build the database?

---

## Review the Data Model

- Is the data model complete and reflects all program requirements?
- Have we identified all entities, relationships, and data flows?
- Does the data model align with the MEAL plan and indicators?

## Define Database Structure

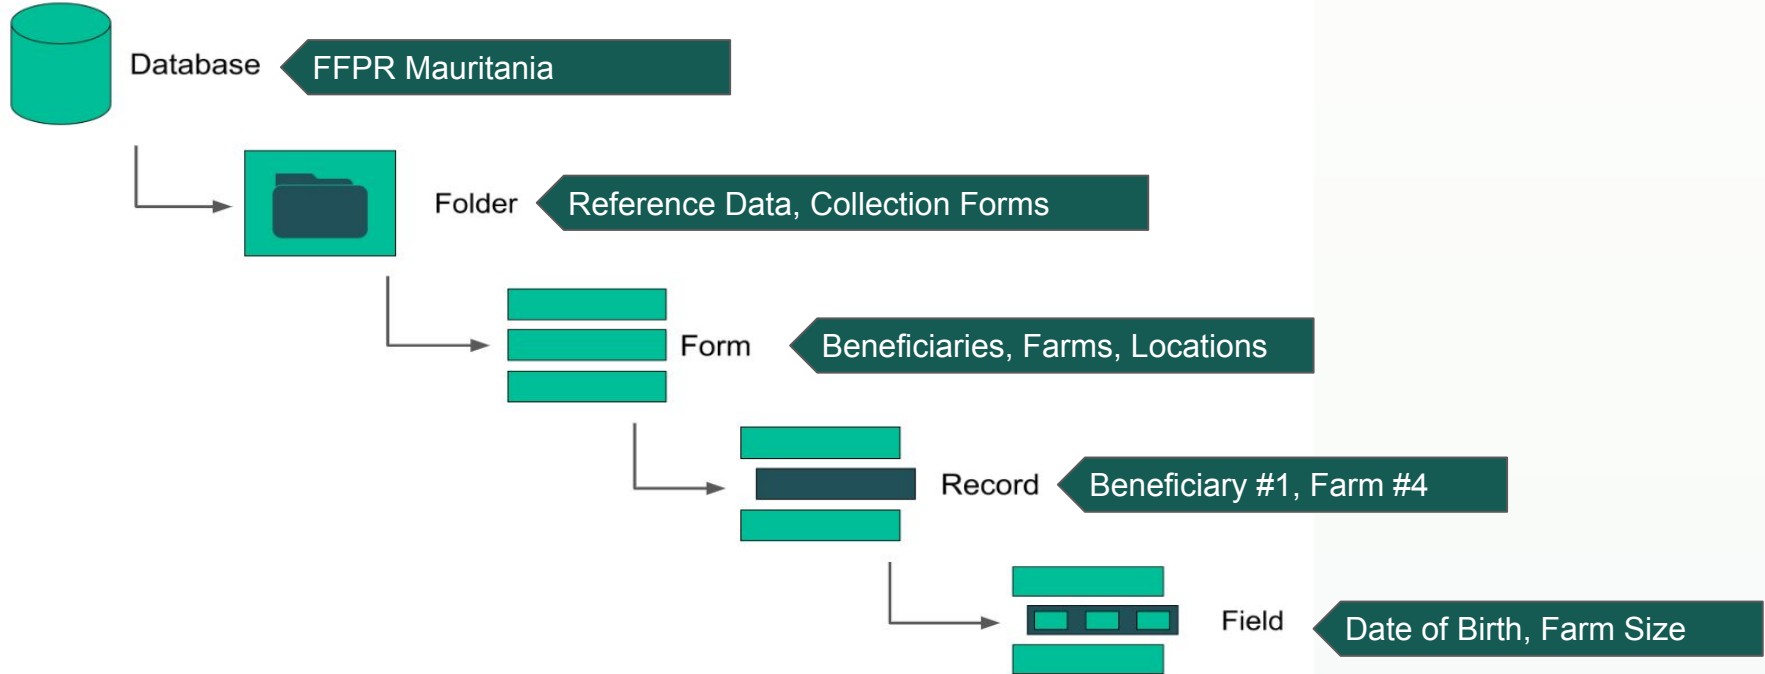

- How will we translate the data model into database forms?
- Have we identified the necessary fields and their data types?
- Is the database design scalable and adaptable to future needs?

## Ensure Data Quality and Compliance

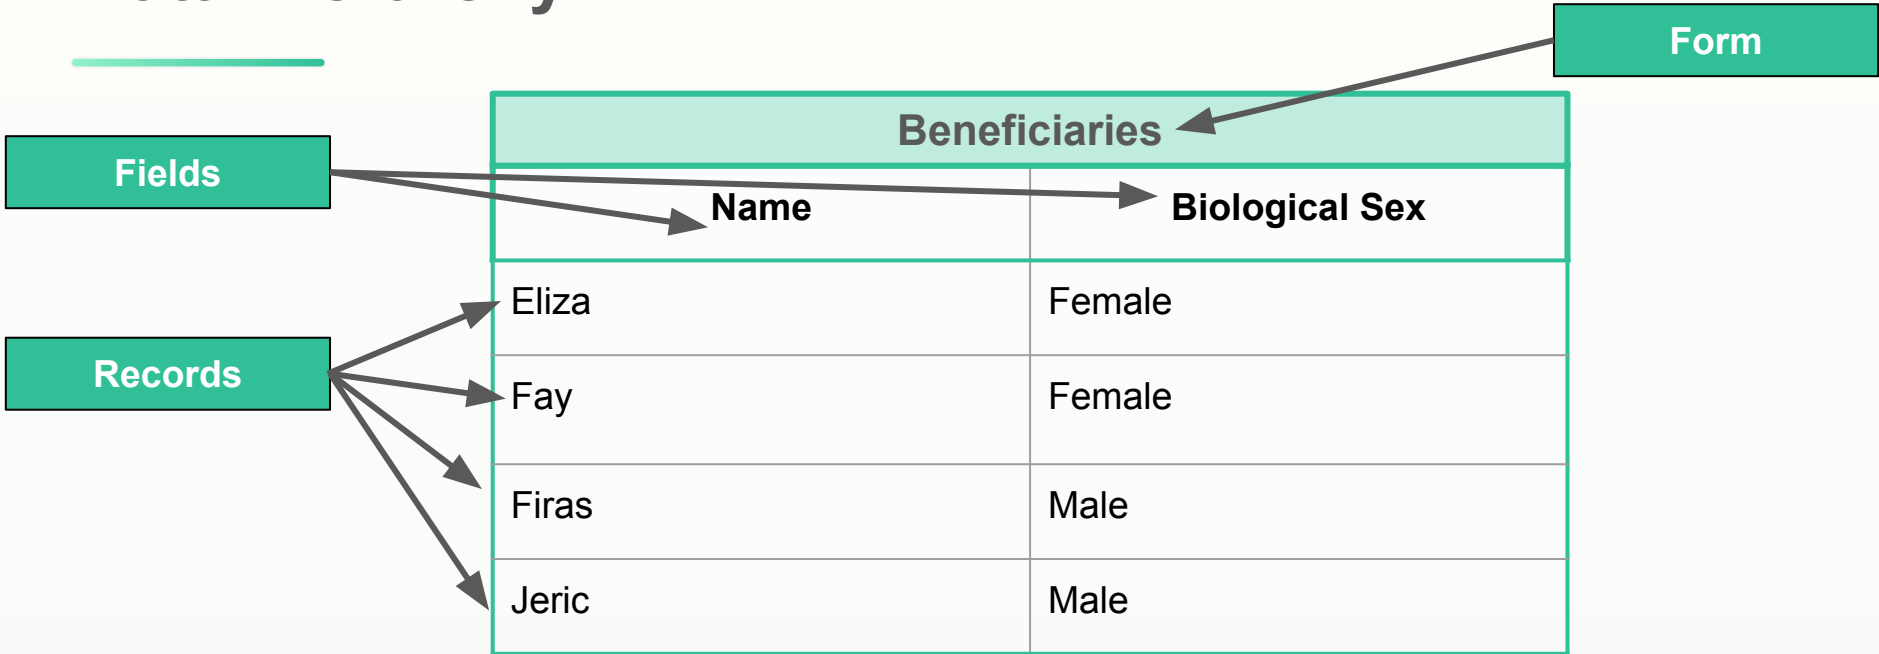

- Have we established measures to maintain data integrity?
- Does the design comply with donor, country, and organizational policies?
- Are user roles and responsibilities clearly defined?

# Reference Forms vs Subforms

## Reference Forms

Use Reference Forms when you have standard lists that are to be reused across multiple forms (e.g. locations)

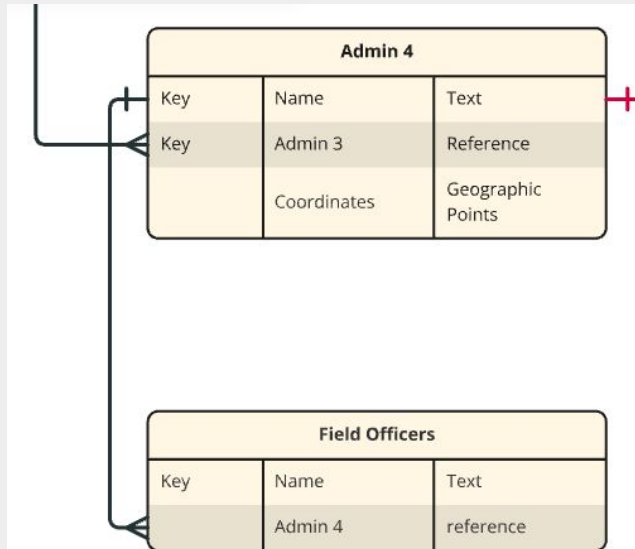

## Subforms

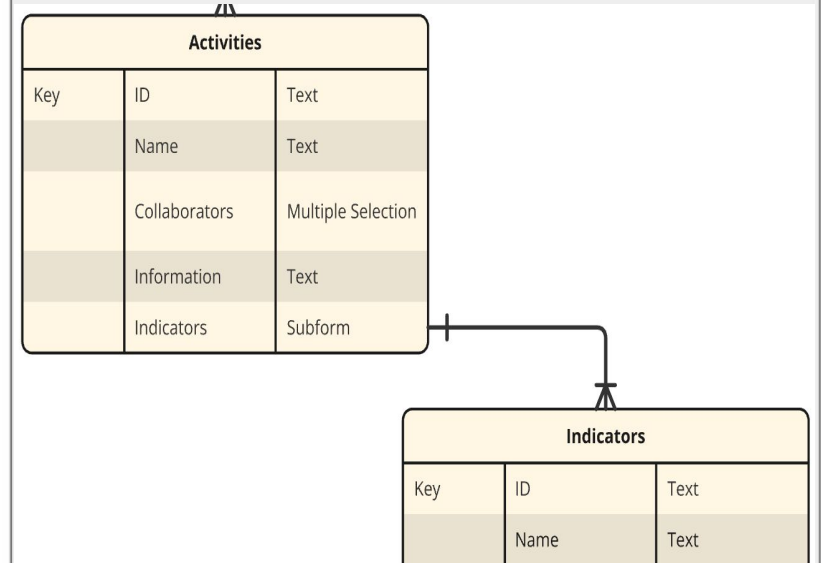

Use Subforms when you need to capture recurring or repetitive information relating to a specific record (e.g. periodic reports)

# Reference Forms vs Subforms

## Reference Forms

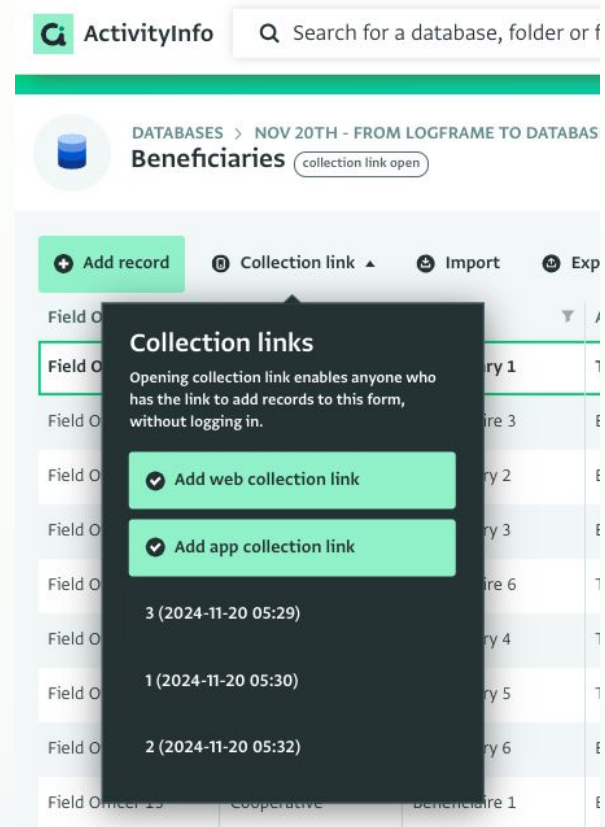

## Subforms

# How do you want to collect your data?

## Collection Links

- **Definition:** Collection Links allow you to collect data from external users without requiring them to have an ActivityInfo account.
- **Purpose:** Facilitate data collection through shareable web links for surveys and forms.
- **Key Features:** Ease of Sharing, Anonymous Submissions, App Collection Links.

The screenshot displays the ActivityInfo web interface. At the top, there is a search bar with the text 'Search for a database, folder or f'. Below this, a breadcrumb trail reads 'DATABASES > NOV 20TH - FROM LOGFRAME TO DATABASES'. The main content area shows a database named 'Beneficiaries' with a 'collection link open' button. A menu is open with options: '+ Add record', 'Collection link', 'Import', and 'Exp'. A modal window titled 'Collection links' is overlaid on the screen. It contains the text: 'Opening collection link enables anyone who has the link to add records to this form, without logging in.' Below this text are two buttons: 'Add web collection link' and 'Add app collection link', both with checkmarks. At the bottom of the modal, there is a list of recent actions: '3 (2024-11-20 05:29)', '1 (2024-11-20 05:30)', and '2 (2024-11-20 05:32)'. The background shows a table with columns for 'Field O', 'ry 1', 'ry 2', 'ry 3', 'ry 4', 'ry 5', and 'ry 6'.

# How do you want to collect your data?

## Offline Mode

- **Definition:** Offline Mode enables users to collect and manage data in ActivityInfo without an internet connection.
- **Purpose:** Allow data collection in remote areas or situations with unreliable connectivity.
- **Key Features:** Local Storage, Data Entry and Review, Automatic Synchronization.

---

## Validation Rules

- **Definition:** Validation rules restrict what users are allowed to input in a field.
- **Purpose:** Ensure data integrity by preventing invalid data entries.
- **Key Features:** Mandatory Constraints, Customizable Conditions, Error Messaging

# Ensure Data Quality

## Relevance Rules

- **Definition:** Relevance rules, also known as **skip logic**, determine whether a field is shown during data entry.
- **Purpose:** Streamline data entry by displaying only fields relevant to the user's previous responses.
- **Key Features:** Conditional Visibility, Dynamic Form Behavior, Integration with Required Fields.

# Live Demonstration in ActivityInfo

# Key Messages

---

- **Translating Data Models into Functional Databases**
  - Reflect your data model accurately to meet program requirements.
- **Ensuring Data Quality is Paramount**
  - Use validation and relevance rules to maintain data integrity.
- **Effective Data Collection Strategies**
  - Leverage tools like collection links and offline modes for efficient data collection.
- **Planning for Scalability and Adaptability**
  - Design flexible and scalable databases to support future growth.
